Harshita Adlakha

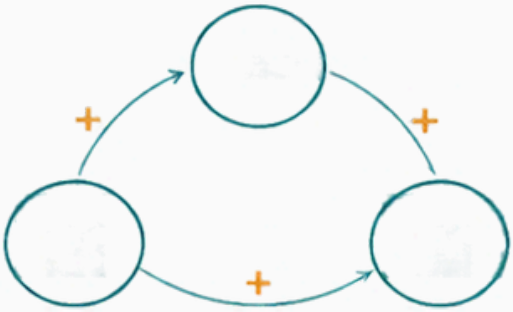

Making AI safe enough to fly.
ECE undergrad researching verification of AI in safety-critical aerospace systems.

B.Tech ECE · Bangalore Institute of Technology (VTU) · 2024–2028 · GPA 7.9

SELECTED PROJECTS

LineCheck · Beta Fund × AWS × OpenAI Multi-Model Hackathon · Oct 2026
Co-built in one day with Paras Adlakha: an AI inspector aircraft technicians call on FaceTime. It inspects a photo of the part, cites the FAA repair manual, checks service history and airworthiness directives, and drafts the work order for a certificated mechanic to sign.
Loop: technician shortage → less experience per shift → more errors. LineCheck cuts the last link.

FDIR Copilot · Accel AI Innovate Paris · Oct 2026
AI flight controller for small satellites: detects a fault, isolates the root cause from a causal graph and recalls past incidents from memory.
93% root-cause accuracy vs 32% for a limit-check console; 70 s median detection.

Sepsis Early Warning · Clinical ML · Mar 2026
~0.91 AUROC, 7 hours before onset (Sepsis-3); 441 time-series features from 44 ICU signals, XGBoost tuned by Bayesian search.
Also: PharmaSentinel (multi-task BERT, 215K+ reviews), Readmission Predictor (130 US hospitals).

RESEARCH 2 papers, AIAA SciTech 2027 · 1 paper, IAC 2026 · Research Associate, Blue Marble Space
SKILLS Python · C/C++ · Verilog · MATLAB · PyTorch · XGBoost · RAG · multi-agent · GCP · MBSE
